Abstract

One or two sentences providing a **basic introduction** to the field, comprehensible to a scientist in any discipline.

Two to three sentences of **more detailed background**, comprehensible to scientists in related disciplines.

One sentence clearly stating the **general problem** being addressed by this particular study.

One sentence summarizing the main result (with the words “**here we show**” or their equivalent).

Two or three sentences explaining what the **main result** reveals in direct comparison to what was thought to be the case previously, or how the main result adds to previous knowledge.

One or two sentences to put the results into a more **general context**.

Two or three sentences to provide a **broader perspective**, readily comprehensible to a scientist in any discipline.

Methods

We report how we determined our sample size (Monnot, Reniou, Parguel, & Elgaaied-Gambier, 2019), all data exclusions (if any), all manipulations, and all measures in the study.

Participants

The city of Leicester may be facing a localised lockdown after a rise in coronavirus cases, Home Secretary Priti Patel has confirmed. Speaking on the BBC’s Andrew Marr Show, she said it was “correct” that the government was considering the move, reported in the Sunday Times. About 25% of Leicester’s 2,494 confirmed Covid-19 cases were reported in the two weeks before 16 June (Ajzen, 2011; Monnot et al., 2019). Mayor Sir Peter Soulsby said there was “no immediate prospect” of a lockdown.

Material

Procedure

Data analysis

We used R (Version 4.0.2; R Core Team, 2020) and the R-package *papaja* (Version 0.1.0.9942; Aust & Barth, 2020) for all our analyses.
